Part 2: Copilot Prompt Reaction

1. Some similarities in the generated image and the original artwork is how the light shining through, is a focal point in both of them. In both of them the background is very dark.

2. Some differences between the 2 is how in the Copilot image, there is no implied motion unlike the original. The light also focuses more on the people under the light instead of the table.

3. I think these differences occurred because I wasn't clear enough in my explanation to the ai. This caused some parts of the picture to be guessed by the ai.

4. Some aspects that were interpreted well by Copilot is when I said the room is very dark, and the light makes the viewers eyes look at it.

5. Some aspects that did not translate effectively is when I said the bright light goes to the table. Copilot instead made the light go to the 2 people under it.

Visual analysis

The artwork I chose is "The calling of St. Matthew" and it is in the course ebook.

lines - There is a strong use of directional lines to lead viewers etes to main points in the painting. like how there is a beam of light that points at the people at the table.

Shape - There are many organic shapes like the people in the painting. The window in the painting is an example of a geometric shape.

Value - The painting has extreme dark and extreme light to show where the viewer should be looking in the painting.

Space - The use of overlapping makes the painting feel more realistic and 3D.

Color - The colors used are very similar, but the dark colors make the bright light stick out in the painting.

Motion and time - The two people pointing at something in the painting is an implied motion.
